LiveAbout uses cookies to provide you with a great user experience. By using LiveAbout, you accept the use of our cookies. Goran Bogicevic's racing car images from Fotolia.com Racing have many different types—but each type focuses on specially designed racing cars competing against each other in different scenarios. Racing has been around since 1895 and has become one of the most popular sports in the world. Manufactured in Maranello, ---Ferrari is one of the most popular racing cars available today. The Scuderia Ferrari team is a famous contestant in the Formula 1 world. In 1993, German driver Michael Schumacher drove a Ferrari 412T---t win a Formula One championship--- making Ferrari one of the most successful brands in racing. The company also built cars for other racing events, such as the A1 Grand Prix series, from 2008 to 2009. They also produced the 599 GTB Fiorano and F430 GT drivers at the GT racing series in other Grand Prix events. Many successful racing cars have been built by Porsche. It produced the legendary Porsche 917 which won two consecutive championships at Le Mans in 1970 and 1971. The Porsche 917 also won the Racing Series world championship, winning eight of the 10 championships. Formula 1 racing is considered the highest form of racing sanctioned by the Internationale de l'Automobile Federation. During the 2006 season, the optimal speed of Formula 1 cars was over 300 km/h. In U.S. ---NASCAR races, such as the Sprint Cup Series and daytona 5000, are the most popular races. The race car used in NASCAR racing has the highest power of about 830 BHP at 9000 RPM, with a maximum torque of 520 pounds per foot. They are rigidly restricted in relation to the parts, materials, size, minimum component weight and other parts allowed. Nascar races typically 300-500 miles in length and design life of an engine for cars ranging up to 800 miles. The cars used in Formula 1 racing are one-seater racers, usually with a custom V8 2.4L. The ignition and fuel system is controlled by a systematic digital instrument management system, on a computer. With a minimum weight of 95 kg, these vehicles generate a maximum power of about 755 BHP at over 19,000 RPM and a maximum torque of 214 pounds per foot. Each Formula 1 racing car has much fewer limitations than NASCAR. The Car Bible is supported by the reader. When you buy through the links on our website, we can earn an affiliate commission. Learn more A helmet is very important if you are accelerating around open track, racing cars, and enjoying in this thrilling motorsport. Racing at high speeds is exhilarating, but it is also a bit dangerous. Helmets allow you to enjoy the sport you love while stays. And in the case of out of accidents, helmets can actually be rescued. That's why it's so important to avoid any old helmets when you climb into your car and instead choose a specially built helmet to withstand can come with racing. You need a helmet that takes racing as seriously as you do. While there are plenty of options available, we've rounded up our picks for the best racing helmet right here. They will keep you safe while still allowing you to be comfortable and comfortable on the track. Best Racing Helmet If there is a safe, sturdy and reliable helmet, it is the Open Racing Helmet approved by Conquer Snell. A great choice for any driver who likes open-sided helmets, this tough and reliable racing helmet is a great overall product. Made of lightweight fiberglass case, it's comfortable to wear and prioritizes safety above all. This Conquer racing helmet is padded with fire retardant materials that help cushion your head. Removable cheek pads ensure you can increase or decrease comfort according to your personal preferences. Worried about being warm? This helmet has a ventilated airflow that will allow the air to flow freely. A Kevlar chin strap fixed all in place. One of the biggest - and most important - details of this Conquer open-faced racing helmet is that it Snell approves. It's Snell SA2015 certified, which means it meets Snell's required safety standards to ensure you're wearing one of the most protective hat pieces. Because of this, no matter what level you are racing or competing in, you will know you are prepared and protected. Drivers who want full coverage from their helmets will love the Conquer Carbon Fiber Full Face Auto Racing Helmet. This racing helmet is lightweight, but it offers complete coverage and complete cushioning to ensure it fits comfortably. The helmet is built from carbon fiber composite, giving it a hard outer shell with sleek style. Underneath, a cushioned interior is constructed from fire retardant materials for greater safety. A variety of vents are also included throughout the helmet to ensure you stay cool and airy while you race. Finally, a three mm scratch-resistant, flame-resistant shield is complete with a tear-off post. In addition to looking cool, this Conquer full-face racing helmet is also very safe. It's Snell SA2015 certified, and it includes lace hans inserted in the shell. Snell safety standards are strict, so you can be confident that this racing helmet is properly regulated to keep you safe on the track. Conquer Open Face Rally racing helmets are more than just safety racing helmets. It also offers a few driver privileges, giving you greater flexibility and some unique benefits. Made of a fiberglass outer shell, this helmet is lightweight and won't weigh you down. Inside, a comfortable cushioned interior made of fire retardant material will cushion you. Removable cheek pads can be added or removed depending on your preferences. And all helmets approved by Snell SA2015 means you'll choose racing helmets manufactured to meet Snell Snell's harsh safety standards auto racing. But where this helmet shines are its extra features. Removable cheek pads are not just for comfort ---you can adjust them to install wireless or wired communication systems. A microphone shield is included to reduce noise and ensure you can communicate clearly. It's the perfect helmet for anyone who needs to have seamless communication when competing. And you don't have to sacrifice safety to get these extra features and benefits. As for the advantages by name and by nature, Bell's K. 1 Pro Helmet is an up and coming model to watch out for in the automotive market. This SA2015-approved helmet, available in various shades including white, matte black, red circuit and blue circuit, is available to all riders who want the best helmet to suit their racing needs. The high-end chin bar design is just one of many features that allow K. 1 to stand out from the crowd. Optimal ventilation is the difference between a good helmet and an excellent helmet: and Bell's helmet is definitely one through matching bar vents, ten intakes and extract vents around the upper and lower chins. However, our personal favorite feature is the hollow synthetic rubber pad seal that prevents all the specifications of dust and dirt from seeping into the helmet. All in all, this is a cool and comfortable helmet at a most competitive price. Are you itching to get a helmet that is greatness that is on par with your racing abilities? RaceQuip's glossy white helmet will have other riders practically drooling with envy. Not only does it look great, but it also helps you get the perfect shape thanks to the optimal support for the head and neck it provides. If you've had difficulties in the past with helmet accessories, RaceQuip's website contains a thorough size chart so you don't guess -- thus jeopardizing your safety on the track. In particular, we like the way Decal on the face shield of this helmet is removable, allowing users to customize depending on personal preferences. Join a pile of satisfied racers and choose RaceQuip - you won't regret it! The HJC Helmets AR10 III Auto Helmets are a great choice because it combines all the best features of top racing helmets into a lightweight, easy-to-wear product. It is difficult and powerful, it is very safe and protective, and it is also comfortable in all different settings. Made of rubber tone material and weighing just four pounds, this helmet is lightweight and comfortable. The exterior casing is constructed from an advanced fiberglass composite woven using an advanced design that is only for auto racing. It has a polycarbonate anti-fog shield with tearing posts as well as a pre-installed M6 terminal to limit the head and neck. An advanced ACS channel ventilation system provides full front-to-back airflow, heat discharge and humidity to keep cool. You can even customize this racing helmet with an optional shield in a variety of colors. While the exterior of this racing helmet is sleek, what's inside is also amazing. That is and cushioned with comfortable carbon material, fireproof and moisture absorbent. You won't have to grapple with discomfort when you race, whether you're facing high temperatures, dust, or anything else. And, most important of all, with the approval of Snell SA2015, you will know this helmet is safe and sound. If Zamp's eight bright designs are not enough to entice you, the desirable features on its large OT helmet will help you enter your bank details at slight speed. Whether you're attracted to simple, minimalist designs, or like to stand out from the crowd, you've got a wide selection on a scale from solid black to graphic cam. With relation to ventilation, five vents can be adjusted to suit your personal preferences. Similarly, although protective foam cushions will easily protect your head and neck if you get stuck, it's not too warm to make you swelter on the track. Meeting all Snell and DOT safety standards, Zamp's helmet delivers quality at every level. Warning: This product does not contain a cut-out for glasses. Can we ever have enough conquest and their attention to detail? In short: we absolutely can not! Their auto-facing dynamic helmets are five stars in every way. For a start, the stability it provides thanks to the chin bar will make you a better driver: for peace of mind knowing that you have been guaranteed head and neck protection is invaluable. As a Snell SA2015 certified design, Conquer turns fireproof cushions on the interior from an SA requirement into a notable feature. Although some motorists may complain of the 'tight' fit of this chromatic helmet, Conquer claims that the more fit, the less neck tension a driver will feel in the driver's seat. And countless other riders agree! Like Conquer, RaceQuip equips drivers with the safety they crave over and over again. Their second product to be reviewed today, their Snell SA2015 white ball Open Face Helmet, allows drivers to feel the wind on their faces when racing: a feeling of complete freedom. RaceQuip do away with frills and instead, focus on making their drivers comfortable and safe. While some customers are amused to talk about how the helmet is so big that it makes them look like a Space Man, a big plus is that the glasses wearers have a lot of wobbly rooms. Plus, RaceQuip pulls out all the stops to make sure that their SFI helmet is as durable as you can get thanks to its included storage bag and fireproof configuration. Available from small to extremely large, it is a reliable helmet suitable for all riders. Our final product reviewed today is one of our personal favorites. Conquer's Rally Racing Helmet is for a racer who knows they are a bee's knee. Its fiberglass casing structure will keep the helmet lightweight, reduced straight neck and overall fatigue while racing. Plus, like all rally racing helmets should be, it's Snell SA2015 approved. Conquer realizes that drivers don't want a confusing sticker in their peripherals Instead, the company ensures its brand stickers remain neat inside their helmets. One of our favorite features is that the sweet optimal sun viseset can be removed whenever you want. The only trouble you'll have with this helmet is choosing what shade to go for -- Matte Black or White Gloss! Acceptable at all sanctioned SSCA events, this helmet will get you on track without any problems for half the price. Trying to pick out a new racing helmet is not easy. You have to consider safety, but you also have to consider other details, like how comfortable your own and how well the helmet will work when you drive. You also need to make sure you are choosing a helmet designed for racing instead of other types of driving. If you're trying to sort through all the helmets out there, our buying guide can help you find the racing helmet that suits your needs. Things to consider When buying an auto racing helmet buying an auto racing helmet is not really something you decide to get: it's a necessary step you have to take to be allowed on a track. So if you have to get a helmet, it could well be the one that attracts your attention. Ask yourself the three appropriate questions below before placing the right helmet for you. Does my potential helmet meet or exceed the Snell SA15 rating? Buying a Snell SA2015 certified helmet gives riders peace of mind that they will be kept safe when wearing 'Special Apps' helmets in competitive sports and motor racing. However, the Snell SA15 rating - in which the manufacturer must provide fire retardant lining and head and neck restrictions to protect the driver - means that all helmets considered in this purchase guide are not suitable for motorcyclists, as they are designed with smaller

eye gates. Therefore, these smaller eye gates can affect the visibility of cyclists (moto) when driving and therefore, the overall safety of others. Is my helmet ventilated enough? Look for a helmet that contains vents so that the driver can breathe easily. Otherwise, they risk becoming exhausted before they leave the starting line. Models such as conquer Snell's Dynamic Helmets contain ventilation in front, rear and top to ensure that users are receiving optimal air intake in circulation. How does the system control the head and neck? The limited system is said to be the most important part of any helmet – without them, your head can go spinning when involved in an impact. Although they are quite expensive, a serious driver will have to buy a Snell SAH2015 rated helmet and not just your SA2015 to ensure they are fully protected. Full vs. Face Auto Helmets All riders are people with full helmets or people with open faces. If you're new to auto racing, it's time to decide what kind of racer you fall into! According to statistics, full-face helmets are safer than open-faced helmets. However, if you, you, contradicting the statistics - which assert that the helmet faces full safety statistics - and that in relation to a collision, these helmets are a lot harder to remove if an accident occurs. However, we cannot fault a racer for choosing to build the entire face when it rains and they are protected from the elements. There's no doubt about it: the open-sided helmet looks amazing. Plus, we're going to play devil advocates and think these statistics may be wrong, since the lack of blind spots that come with neck freedom of movement makes these helmets safer in many respects. However, their open construction means intense winds and unsusidisadvantageous weather can distract motorists, leading to more accidents that could have been prevented. In short, both helmet designs have their remarkable privileges. It's now up to you to decide what style suits your personality and thirst for adventure! Types of helmet racing helmets: competitive racing is an incredible sport; if everything goes according to plan. However, even with just a small slip up, you can be off the track and on your way to the emergency room. Therefore, for safety sake, your racing helmet must adhere to the Snell or FIA similarities. Similarly, you should buy a full-face helmet if your ride option is a one-seater or prototype car. Just be careful out there! Helmet Rally: Have you ever noticed as soon as you tell people that you're a rally driver, they pull all sorts of weird faces? That's the truth; Rally drivers are basically adrenalin junkies thriving out of dangerous control. So like typical racing helmets, your helmet must be Snell or FIA-homologated and as powerful as can be. You'll know the quality of rally helmets if they already have an internal communication system included, as communication is key in rally races. Karting Helmets: Karting seems like onlookers as 'just a bit of fun'. However, hitting a tire wall first can lead to some quite serious injuries. Go for a lightweight model to reduce neck tension - you'll thank us later! Track Day Helmets: These helmets are for cold days and training on the track. No, they don't need to be tenacious as race helmets, but we still recommend investing a lot – especially when you're still going up the gears to hit high speeds. FiberGlass vs. Composite vs Carbon Fiber Car Racing Helmets That are powerful, cheap, and ready to be raced with. Fiberglass is one of the cheapest helmet materials on the market: buyers who are not willing to break up banks can guarantee cheap fiberglass for a steal. However, they are advised for those who go slower, in no frequent major collisions. This is due to the fragility of fiberglass and the tendency to consume impacts through rupture. So although the helmet will resist a crash, the second can cause serious injury to an intense rider. An excellent combination of all the best characteristics from a variety of materials, composite accident helmets are the mid-point between fiberglass and and fiber helmet. If you want to safely target in the middle of the road, we recommend choosing this good material. If you don't like your helmet to weigh you down, carbon fiber helmets are significantly lighter than fiberglass helmets, thus reducing fatigue and, therefore, the overall safety of the rider behind the wheel. If you're willing to invest in safety and performance (which we believe everyone should!), carbon fiber helmets are the best on the block. How to choose the right size If each helmet manufacturer has a dollar for how many times a buyer complains about their helmet being 'too tight', they'd be retired already! The exact size of the helmet, at first, should feel tightly uncomfortable. In other words, it will feel 'too' so tight that you won't be able to wear it if the helmet is a little smaller. So if you can feel the cheek pads and the lining pressed up against noggin', you've got the right fit. If you still need a little re peace of mind that your helmet fits as well as cinderella-equipped 'little glass slippers', try pulling your helmet out. Any slight movement is not allowed! However, thanks to so many matching chart companies now produced with each helmet, you will have a little help in ensuring that your helmet will provide surefire protection when you are on the track. Top Pick our top pick for the best racing helmet? It was Conquer Snell who approved the helmet race opener. This is a great helmet both in terms of safety and comfort. It is lightweight thanks to its fiberglass shell, but it is also very durable. It will protect you from the inside out, with fireproof cushions underneath the tough outer shell. Hans lace insert provides a safe layer while you are on the track. Worried about getting hot while you're speeding around the track? Ventilation throughout this racing helmet helps keep your cool and increase airflow. And most important of all, this Conquer open face helmet is Snell SA2015 certified. It is safe and can comply with Snell's strict safety standards so that you can firmly believe in its effectiveness. Source: Add your rating
